AI-Use Log

AI-use log

Name: Tymofii Brik Assignment: KSE Sociology 2026/2027 syllabus redesign (weekend project)
Date: 2026-09-11 to 2026-09-12

Filled per ai-log-template.md — one continuous session, so item 2 lists every prompt in order rather than a single exchange.

1. Tool / tier / date

Claude (Claude Code desktop app), Max plan (paid). 2026-09-11 through 2026-09-12.

2. Exact prompts used (verbatim, in order)

1. “create new project for this weekend / 1) i need to create new syllabus for my kse sociology class / 2) use hub and lms access to downlaod my old syllabus, brik sociology / 3) evaluate against benchamrs: what typical syllabus in Harvard and other top-20 scools in sociology have / 4) provide a list of topics to add / 5) use AI agentic summer school method to add AI driven data assignemtns and projects to each class / 6) i will have students who either dont have or have free access to chat gpt, claude and gemini. I need to explain them how to make assigments and how to provide log. the most important is log, i dont know myself how to do it – explain so i can expain to others”
2. “instead of using "Syllabus_KSE_sociology_01092024.docx" search my computer for the folder of teaching at kse, there must be the latest syllabus to teach sociology at kse in 2025”
3. “[uploaded Візуалізація 2026_2027.xlsx and Довідка_дати_викладання_Соціологія.docx] this is the data for the number of lectures and practicums. I will teach them all with no teaching assistants, and i want to spend time of practicums on AI”
4. “use візуалізація”
5. “what is the status here”
6. “you nean I need to read and confirm "topics to add"?”
7. “I want to read the benchmark first, pls provide word file”
8. “I want to include gender, social movements, race vs nation. Digital should be a part of my AI driven assignments. Religion is somewhere in the culture section”

9. “i need to see the guide for AI”
10. “i need slides which I can show to sudents as a manual to explain how to extract logs and how to submit logs / also, based on AI agentic shcool, i need to understand how to collect and read logs (is it in gituhub, moodle?)”
11. “i still dont get how to use logs. the manual is not enough, maybe some video demonstration or screenshots? do you know any links to such demos?”
12. “[screenshot of Claude desktop app] i am in a claude, what should I do now”
13. “i want to submit LOG of this very conversation, can you extract it for me”

3. What I did with the output

Not a single accept/reject — this was iterative, and I redirected the AI’s approach at several points rather than taking the first answer:

- **Rejected and redirected the data source twice.** The AI first tried Gmail/Drive attachments for the old syllabus; I redirected it to search my own filesystem instead (prompt 2), which found the real, more current file.
- **Overrode the AI’s schedule interpretation.** It found a genuine conflict between two source documents (8×“1L+1P” vs. the xlsx’s “2L+2P”) and presented both readings rather than picking one; I made the call myself (prompt 4: “use візуалізація”) rather than accepting either default.
- **Overrode its topic proposals.** It suggested 5 candidate new topics; I picked 3 to include outright and specified exactly how the other 2 (digital, religion) should be handled instead of added as new units (prompt 8) — I did not accept its default prioritization as given.
- **Accepted, then asked for a different format.** Its written benchmark report and log guide were used as-is content-wise, but I asked for the same content re-delivered as a Word file and as slides respectively, because the format, not the substance, was wrong for how I’ll actually use it.
- **Caught a tooling failure it disclosed itself.** When it tried to give me literal screenshots of competitors’ help pages, its screenshot tool was broken (rendering blank); it said so rather than presenting a broken result, and substituted an original mockup plus verified links to the real source pages instead.

4. One claim I checked

Claim: the AI stated that the Візуалізація xlsx’s per-week teaching load (“2L 2P” for most weeks, “1L 1P” for the final week) sums to 15 lectures + 15 practicums across the term.

Source checked against: the ECTS line stated independently in both source documents (“4 ECTS credits… 15 l, 15p”) and my own arithmetic on the xlsx row: 7 weeks × 2L2P (14 each) + 1 final week × 1L1P = 15L + 15P.

Result: Confirmed — the sum matches the independently stated ECTS figure in both documents, which is why I accepted the xlsx as the authoritative schedule over the Довідка docx’s undercounted “1L+1P × 8 weeks” summary.
